

AEGIS Executive Security Report

Assessment: AEGIS-2026-0001

Asset: google.com

Status: APPROVED

Overall Risk: HIGH

Executive Summary

The authorized assessment of google.com identified internet-facing services and security-relevant infrastructure. The overall risk level for this assessment is classified as HIGH based on correlated findings and threat intelligence analysis.

Key Findings

- External Email Infrastructure Detected (INFO)
- SPF Record Detected (INFO)
- Administrative Service Exposed (LOW)
- External Email Infrastructure Detected (INFO)
- SPF Record Detected (INFO)
- Administrative Service Exposed (HIGH)
- Web Service Exposure Detected (MEDIUM)

Threat Intelligence Summary

- MX records indicate that the domain receives email.
- Domain publishes an SPF policy.
- SSH service is reachable.
- Active SSH Brute Force Campaigns
- Internet-Facing Web Service

Business Impact

Exposed administrative and web services may increase attack surface visibility and create opportunities for unauthorized access attempts. Continuous monitoring and security control validation are recommended.

Recommendations

- Review SPF, DKIM and DMARC configurations.
- Verify SPF policy is maintained and monitored.
- Restrict SSH access to trusted networks or VPN users.
- Restrict SSH access and enforce strong authentication.

- Review TLS configuration and web security posture.
